model PM330

Stereo Pre Main Amplifier

MARANTZ DESIGN AND SERVICE

Using superior design and selected high grade components, MARANTZ company has created the ultimate in stereo sound. Only **original MARANTZ parts** can insure that your MARANTZ product will continue to perform to the specifications for which it is famous.

Parts for your MARANTZ equipment are generally available to our National Marantz Subsidiary or Agent.

ORDERING PARTS:

Parts can be ordered either by mail or by telex. In both cases, MARANTZ part number has to be specified. If you order by mail, fulfil MARANTZ order forms.

MARANTZ S.A.
EUROPEAN PARTS DEPARTMENT
2, Avenue Léopold III
B-7120 PERONNES-lez-BINCHE
BELGIUM
TWX: 57589 SEPLT B

The following information must be supplied to eliminate delays in processing your order:

1. Complete address
2. Complete part numbers and quantities required
3. Description of parts
4. Model number for which part is required
5. Way of shipment
6. Signature: any order form or telex must be signed otherwise such part order will be considered as null and void.

PARTS ORDERING:

Parts may be ordered from the following addresses:

Telex: 24121

All of the above locations are fully equipped to take care of your total service needs. Because various countries have differing configuration requirements, it is necessary that you contact the service facility in your particular country. In the event that there is no service location listed for your country, please, contact the nearest facility for the necessary assistance.

In case of difficulties, do not hesitate to contact the Technical Department at abovementioned address.

MODEL PM330 STEREO AMPLIFIER

INTRODUCTION

This service manual was prepared for use by Authorized Warranty Stations and contains service information for the Marantz Model PM330 Stereo Console Amplifier.

Servicing information and voltage data included in this manual are intended for use by knowledgeable and experienced personnel only. All instructions should be read carefully. No attempt should be made to proceed without a good understanding of circuitry operation.

The parts list furnishes complete ordering information. Most replacement parts should be ordered from the Marantz Company. However, a simple description is included for parts which can be obtained locally.

1. FUNCTION SWITCH

The function switches control a high voltage (25 V) type switching IC (LC7185H) to select one of the four inputs and the tape monitor channel which is selected with the TAPE OUT/MONITOR switch. The TAPE OUT/MONITOR switch controls a high voltage-type switching IC (LC4066 BH).

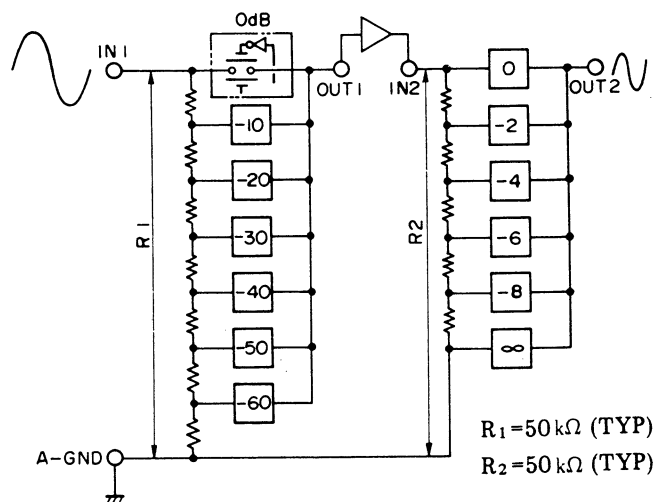

The source which is selected when the power switch was turned off is automatically reselected when the power is turned on.

The signals from the AUX, TUNER and TAPE (1) input terminals are applied to electronic switch QS01. The signal from the PHONO input terminals are amplified (35 dB) and equalized by equalizer amplifier Q401, then applied to electronic switch QS01.

The signals from the TAPE (2) IN terminals are applied to electronic switch QS02, then applied to QS01. The circuits to the TAPE (1) OUT terminals are switched with QS03 so that the signals are not fed back to TAPE (1) when TAPE (1) is selected with the function switch.

2. ELECTRONIC VOLUME CONTROL

Resistors connected in series which are switched by means of analog switches are used for the attenuator. The attenuator consists of two sections: one varies the degree of attenuation in 10 dB steps; the other varies it in 2 dB steps. With this attenuator, the degree of overall attenuation can be varied from 0 dB to -60 dB in 2 dB steps. The analog switches are controlled by an internal oscillator, and the degree of attenuation is automatically set to -40 dB when the power is turned on.

The volume level indicators are controlled by the volume control IC: this IC outputs a DC current at one of 13 levels (a multiple of 50 μ A) depending on the degree of attenuation.

A remote volume control terminal is provided on the rear panel so that the volume can be remotely controlled.

3. PREAMPLIFIER

The first stage of the preamplifier uses op-amplifier NJM 4560DD (selected for internal noise) (QE01) and has a gain of about 20 dB. Loudness control elements are inserted in the NF circuit of this stage so that frequency response is increased by 6 dB at 100 Hz.

The second stage is an NF type tone control circuit using op-amplifier NJM4558D (QE02). The frequency response can be varied with slide type potentiometers as shown below.

TREBLE ± 10 dB at 10 kHz
BASS ± 10 dB at 100 Hz

4. MODE SWITCH CONTROLLER

The loudness control uses a slide switch with a stroke of 1.5 mm to control the loudness elements in stage 1 of the preamplifier.

The low filter circuit follows the 2nd stage of the pre-amplifier and has an attenuation of 3.5 dB at 50 Hz. The muting circuit following the low filter has an attenuation of -20 dB and is controlled by a slide switch with a stroke of 1.5 mm.

5. POWER AMPLIFIER

Hybrid IC STK-3042-IIA is used for the voltage amplifier, and the power amplifier stage uses discrete transistors. STK-3042-IIA is an improved version of STK-3042 and it shows good performance with pop noises. Thus, no muting relay is required for the PM330. The input stage of the power amplifier uses 2SD1302 (QK03 and QK04), which features low V_{ce} saturation so that the output signal is muted when the function switch is operated or the power is turned on and off. (The gain is about 30 dB.) LED driver AN6886 (QX01) is used to indicate the power level in 5 steps.

6. SPEAKER

Two sets of speaker systems can be connected and selected with speaker switches 1 and 2. The headphone jack is always connected to the power amplifier.

7. P.W. BOARDS

As can be seen from the circuit diagram the chassis of Model PM330 consists of the following units. Each unit mounted on a printed circuit board is described within the square enclosed by a bold dotted line on the circuit diagram.

1. Phono Amp./
Input Terminal mounted on P.W. Board P400
2. Main mounted on P.W. Board P700
3. Tone Amp. mounted on P.W. Board PE00
4. Tone Volume mounted on P.W. Board PE01
5. Low Filter mounted on P.W. Board PE02
6. Tone Amp.
Volume Control mounted on P.W. Board PE03
7. Balance Volume mounted on P.W. Board PG02
8. Elect Volume Switch mounted on P.W. Board PG03
9. Power Switch mounted on P.W. Board P000
10. Speaker Switch mounted on P.W. Board PT00
11. Speaker Terminal mounted on P.W. Board PV00
12. Phone Jack mounted on P.W. Board PW00
13. Function
Power Disply mounted on P.W. Board PX00
14. Elect Volume LED mounted on P.W. Board PY00

8. TEST EQUIPMENT REQUIRED FOR SERVICING

This table lists the test equipment required for servicing the Model PM330 Stereo Pre Main Amplifier.

Item	Use
Distortion Analyzer	Distortion measurements
Audio Oscillator	Sinewave and squarewave signal source
AC VTVM	Voltage measurements (AC)
Oscilloscope	Waveform analysis and trouble shooting and ASO alignment
Circuit Tester	Trouble shooting
DC VTVM	Voltage measurements (DC)
AC Wattmeter	Monitors primary power to amplifier
Line Voltmeter	Monitors potential of primary power to amplifier
Variable Autotransformer (0 ~ 140V AC, 10A)	Adjust level of primery power to amplifier
Shorting Plug	Shorts amplifier input to eliminate noise pickup

9. ADJUSTMENT PROCEDURES

1. Volume indicator level adjustment

- 1) Apply an 1 kHz, 100 mV signal to the TUNER IN terminal. Leave the speaker terminal unloaded.
- 2) Depress the UP side of the VOLUME UP/DOWN control until the output level stops increasing.
- 3) Depress the DOWN side until the volume level decreases by 2 steps (about -4 dB).
- 4) Adjust RG24 (3 k Ω) to where 5 (green) LEDs of the volume indicator light.
- 5) Turn the power switch off and turn it on again. Confirm that 2 LEDs of the volume indicator light. Maximize the volume level and confirm that 5 LEDs of the volume indicator light.

2. Idling adjustment

- 1) Open all input and output terminals on the unit.
- 2) Connect a digital voltmeter between the + and - terminals of TP-1 for the L channel or between the + and - terminals of TP-2 for the R channel.
- 3) Adjust R729 (channel L) or R730 (channel R) so that the voltmeter reads 7 mV about 1 minute after the power has been turned on. (Note that the idling current is about 20 mA after the unit has warmed up.)

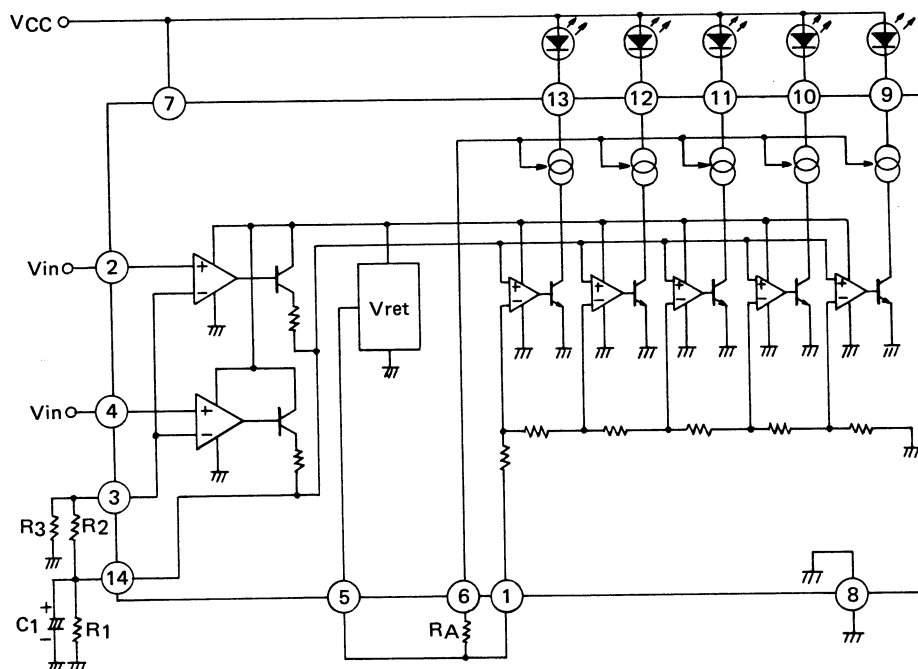

3. Power level indicator adjustment

- 1) Apply a 1 kHz, 170 mV signal to the TUNER IN (R) terminal. Connect an 8-ohm load to the speaker terminals.
- 2) Increase the volume until 5 LEDs of the volume indicator light. Adjust RX05 so that the power level indicator reads 30 W (15.5 V).

10. CIRCUIT DESCRIPTION

10.1 AN6886 LED driver (QX01)

● Block diagram

● Absolute rating (Ta=25°C)

Item	Symbol	Rating	Unit
Supply voltage	VCC	18	V
LED drive terminal voltage	V _{9,10,11,12,13-8}	18	V
LED drive terminal current	I _{9,10,11,12,13}	30	mA
Circuit voltage	V ₁₄₋₈	12	V
Reference voltage terminal output current	I ₅	10	mA
RA Terminal Input current	I ₆	10	mA
Allowable power dissipation	P _D	480	mW
Operating temperature	T _{opr}	-30 ~ +75	°C
Storage temperature	T _{stg}	-55 ~ +150	°C

● Electrical characteristics (VCC=6V, Ta=25°C)

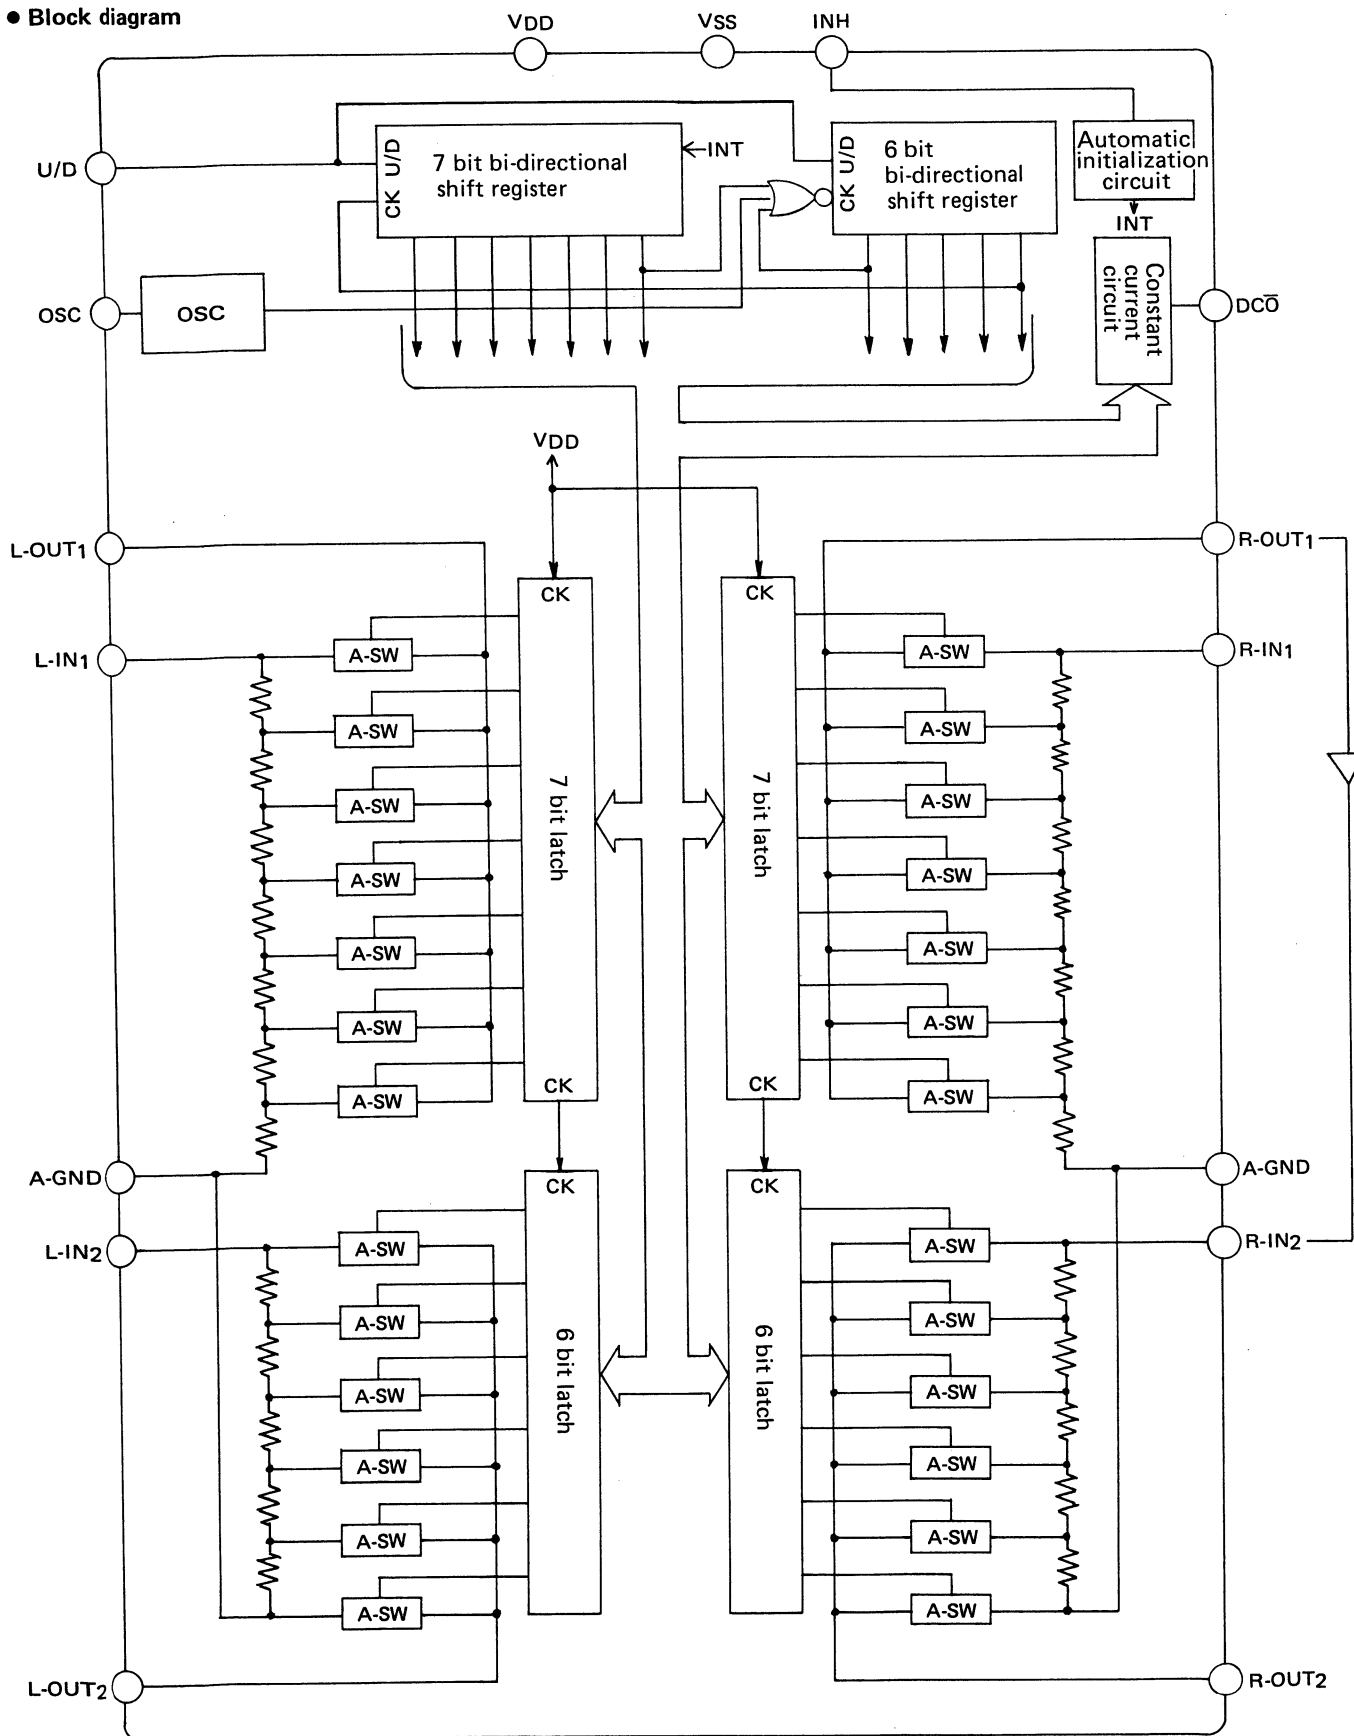

Item	Symbol	Conditions	Min.	Typ.	Max.	Unit
Current consumption	I _{CC}	R _A =Open, V _{in} =0V		5	10	mA
Input bias current	I _{2,4}	-1	-1		0	μA
Reference voltage	V _{ref}	VCC=4 ~ 16V	2.6	2.8	3.0	V
Output current	I _{9~13}	R _A =Open,	4		8	mA
Gain of amplifier	G _{V1}	V ₂ =50mV, R ₁ =10kΩ R ₂ =90kΩ, R ₃ =10kΩ		20		dB
Gain of amplifier	G _{V2}	V ₄ =50mV, R ₁ =10kΩ R ₂ =90kΩ, R ₃ =10kΩ		20		dB

● Typical input levels for driving LEDs

LED	1	2	3	4	5
Level (dB)	-10	-5	0	3	6

10.2 Electronic Volume Control IC TC9153P (QG02)

● Block diagram

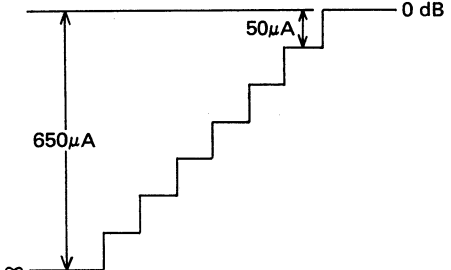

● Absolute ratings

Item	Symbol	Rating	Unit
Supply voltage	V _{DD}	14	V
Input voltage	V _{IN}	-0.3 ~ V _{DD} +0.3	V
Input voltage	V _{IN}	V _{SS} -0.3 ~ V _{DD} +0.3	V
Analog input voltage	V _{IN}	4.0	V _{rms}
Allowable power dissipation	P _D	150	mW
Operating temperature	T _{opr}	-30 ~ 75	°C
Storage temperature	T _{stg}	-55 ~ 125	°C

● Pin configuration

V _{SS}	1	16	V _{DD}
L-OUT ₁	2	15	R-OUT ₁
L-IN ₁	3	14	R-IN ₁
A-GND	4	13	A-GND
L-IN ₂	5	12	R-IN ₂
L-OUT ₂	6	11	R-OUT ₂
INH	7	10	U/D
DCO	8	9	OSC

● Pin functions

Pin No.	Symbol	Function
2 15	L-OUT ₁ R-OUT ₁	10 dB step attenuator output. The input signal is attenuated from 0 to 60 dB in 10 dB steps.
3 14	L-IN ₁ R-IN ₁	10 dB step attenuator input.
4 13	A-GND	Ground terminal
5 12	L-IN ₂ R-IN ₂	2 dB step attenuator input.
6 11	L-OUT ₂ R-OUT ₂	2 dB step attenuator output. The input signal is attenuated from 0 to 8 dB in 2 dB steps.
7	INH	Inhibit terminal. When a low level signal is applied to this terminal, all input and output is inhibited; otherwise, the IC operates normally.
8	DCO	Attenuation indicator drive output. This terminal outputs a DC current at one of 13 levels (a multiple of 50 μ A) depending on the degree of attenuation. 
9	OSC	CR terminal for OSC. The time constant of the capacitor and resistor connected to this terminal determines the up/down speed of volume control.
10	U/D	Up/down control signal input terminal. When a high level signal is applied to this terminal, the volume increases at the rate determined by the oscillator; otherwise, it is reduced at that rate.

11. VOLTAGE CONVERSION

● EUROPEAN MODEL ONLY

To convert the unit to a different power source voltage, change the position as illustrated in the drawing below.

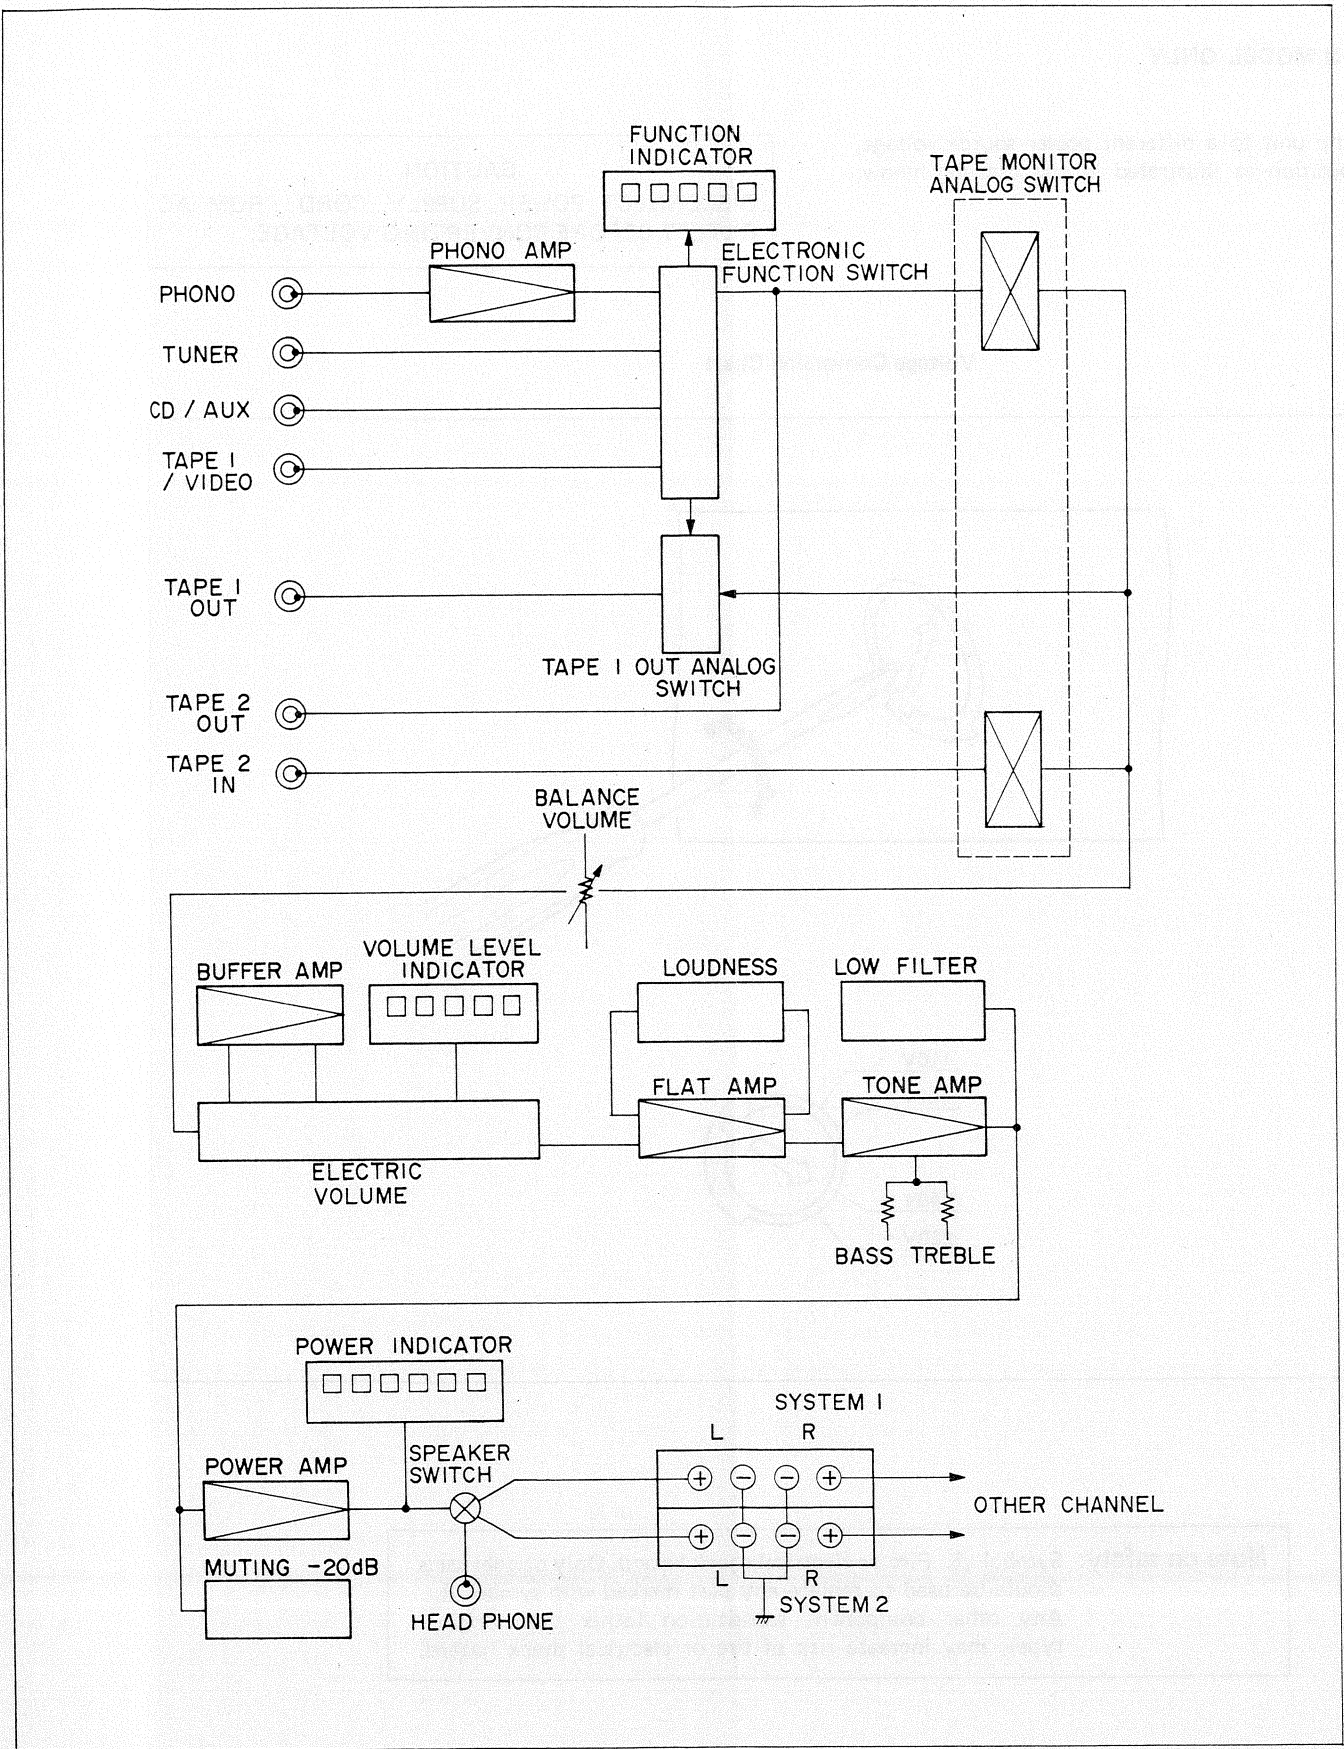

CAUTION
DISCONNECT POWER SUPPLY CORD FROM AC OUTLET BEFORE CONVERTING VOLTAGE.

Voltage Conversion Chart

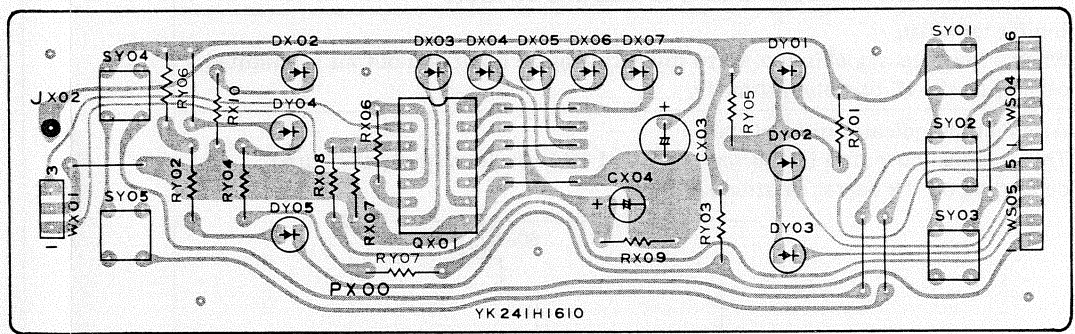

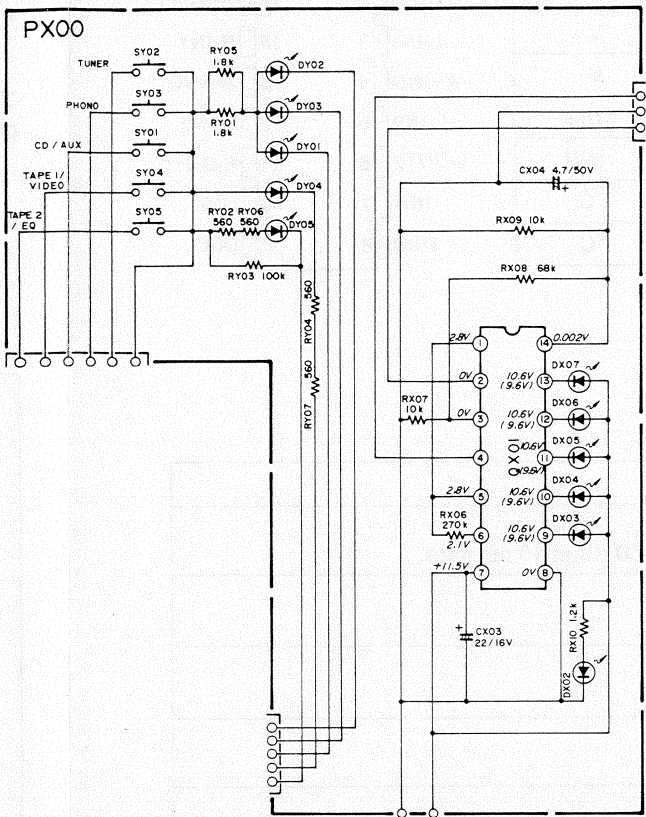

Note on safety: Symbol \triangle Fire or electrical shock hazard. Only original parts should be used to replace any part marked with symbol \triangle . Any other component substitution (other than original type), may increase risk of fire or electrical shock hazard.

NOTE ON SAFETY:

Symbol △ Fire or electrical shock hazard. Only original parts should be used to replace any part marked with symbol △. Any other component substitution (other than original type), may increase risk of fire or electrical shock hazard.

16. TECHNICAL SPECIFICATIONS

AUDIO SECTION

POWER OUTPUT PER CHANNEL

DIN 4 OHMS 1 kHz	49W
RMS 4 OHMS 1 kHz	49W
DIN 8 OHMS 1 kHz	38W
RMS 8 OHMS 1 kHz	37W
TOTAL HARMONIC DISTORTION AT RMS 8 OHMS	0.05%
I.M. DISTORTION	0.05%
DAMPING FACTOR 8 OHMS (1 kHz)	60

MM CARTRIDGE INPUT

Frequency Response (RIAA) 20 Hz ~ 20 kHz	±0.5 dB
Signal-to-Noise Ratio	80 dB
Input Impedance	47k ohms
Input Capacitance	270 pF
Input Sensitivity	2.5 mV
Equivalent Input Noise	1.0 µV

AUX. INPUT

Input Impedance	30 k ohms
Input Sensitivity	150 mV
Frequency Response ±2 dB	10 Hz ~ 40 kHz
Signal-to-Noise Ratio	92 dB

OUTPUT VOLTAGE

Tape Out	460 mV
----------	--------

OUTPUT IMPEDANCE

Tape Out	290 ohms
----------	----------

GENERAL

Power Requirement	110/120/220/240V AC, 50/60 Hz
Power Consumption at Rated Output, both Channels Driven	150 W
Dimensions	
Panel Width	416 mm
Panel Height	55 mm
Depth	260 mm
Weight	
Unit Alone	5.1 kg

Specifications and appearance are subject to change for modification without notice.

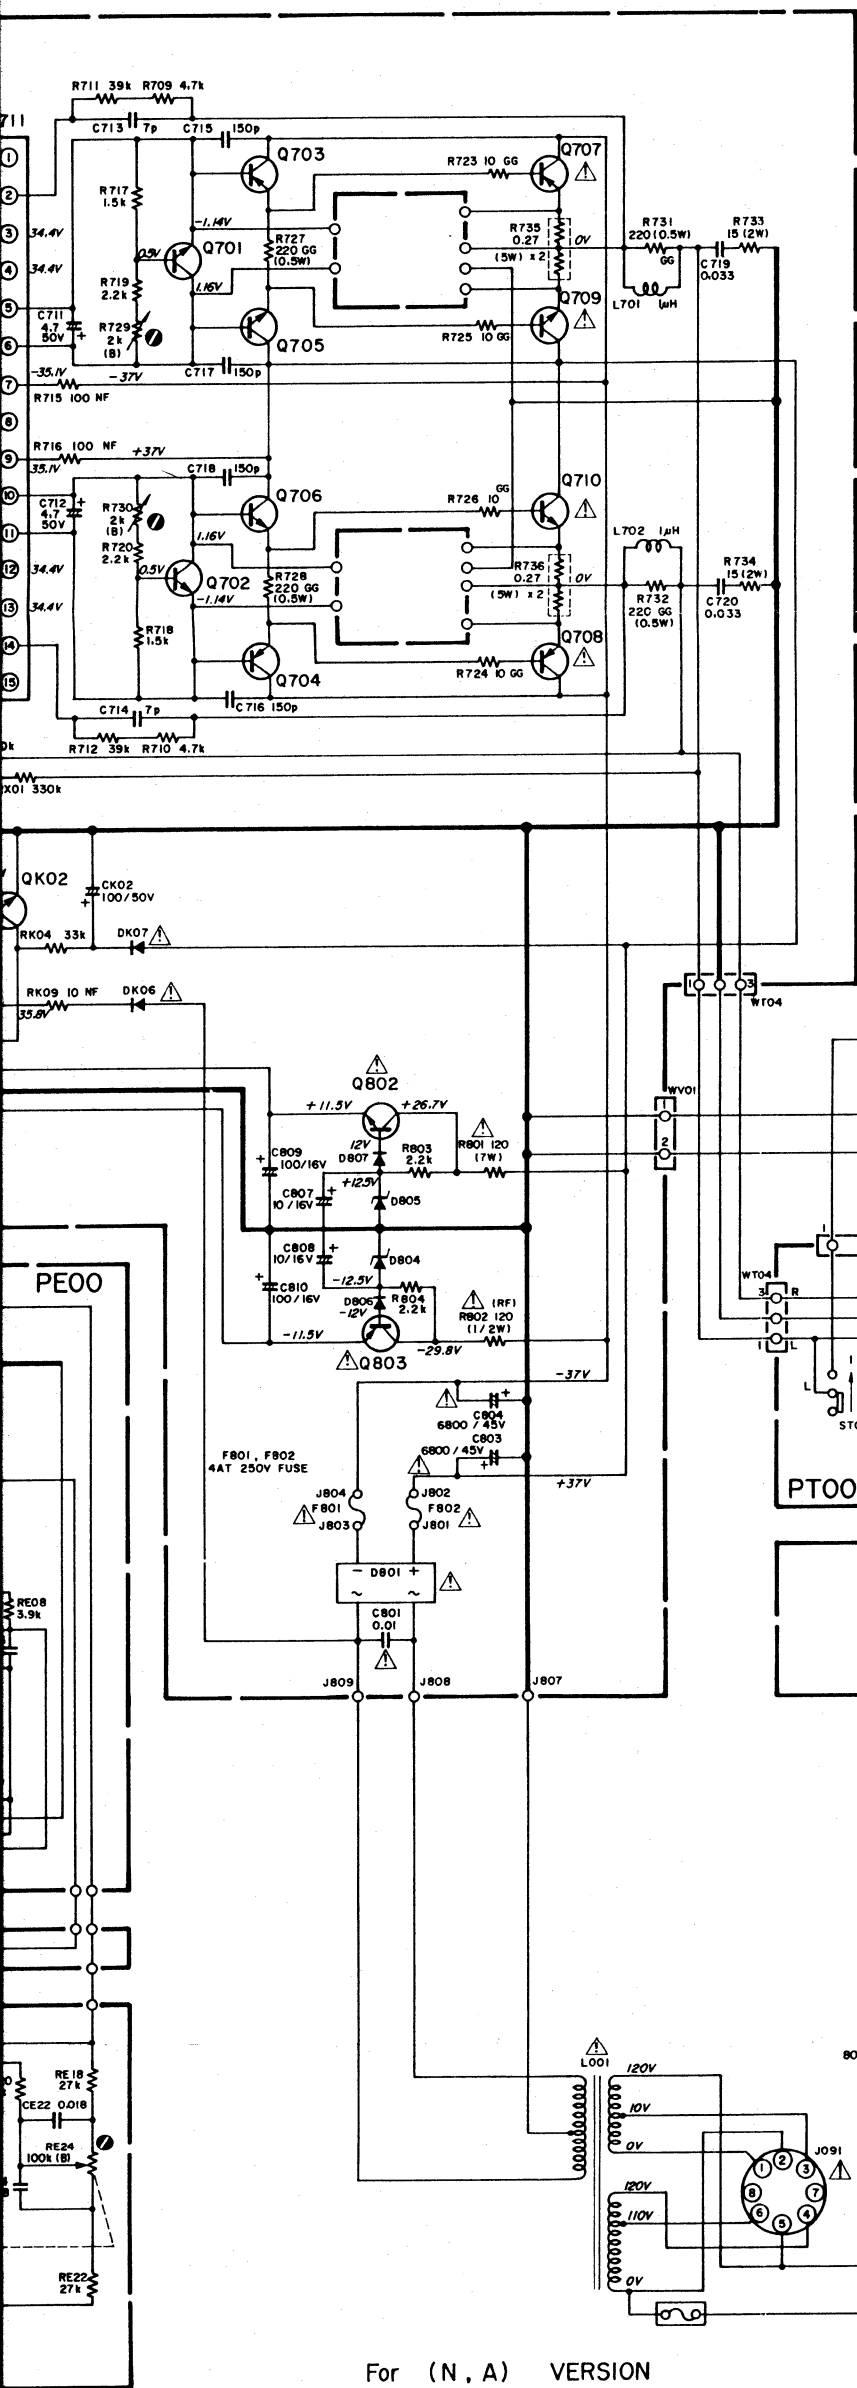

MEMORANDUM

X

Symbol ⚠ Fire or electrical shock hazard. Only original parts should be used to replace any part marked with symbol ⚠. Any other component substitution (other than original type), may increase risk of fire or electrical shock hazard.
